

DEEP VISIBILITY

Identify and visualize all **user and asset behaviours** on your network

Product overview

Deep network visibility for business continuity

Your network is the backbone of your business, supporting every operation, and sometimes exposing you to risks through unauthorized personal use.

Deep Visibility **provides full network traffic inspection** (DPI), enabling complete visibility on protocols and applications running across your infrastructure. It helps identify misconfigurations, performance issues or unauthorized connections.

With **Deep Visibility** you finally know *who* is doing *what*, and gain a clear understanding of which users and assets must be protected by our **NDR platform**.

Nothing should remain invisible for efficient cyber resilience!

Deep Visibility at a glance

Deep Visibility is a **resilient and robust solution for network traffic capture** and analysis :

- > Designed for both edge and core networks
- > Centrally managed for streamlined operations
- > For fast, and efficient analysis
- > To troubleshoot network behaviours in real time
- > Delivers complete network packet and metadata insights

Deep Visibility is **intelligence visibility in action**

Comprehensive

Flexible

Insightful

Strategic

Your **benefits**

✓ *Holistic visibility* across network activity_

Discover who is talking to whom, and track and map every asset on your local network for complete/intelligent visibility

✓ *Comprehensive analysis*_

Real-time and historical visibility for complete understanding, powered by internal storage of up to 16 TB

✓ *Measured performance*_

Identify burst and solve performance issues and application latency

✓ *Analysed protocol*_

Explore and search long term network metadata

Our **approach**

Because visibility is key in cyber resilience our solution provides several key principles

Adapted for all types of deployment_

- > Edge for small and mid size offices
- > Core for large and core networks
- > Through a single management console

Perfect for all types of network and protocols_

- > IT and OT infrastructures
- > Private and public Cloud
- > with flexible interfaces to capture all throughput that is "binding" by design

Integrated with_

- > TAP to simplify and scale network capture
- > Network Detection and Response (NDR) to detect sophisticated threats
- > Full visibility to identify, qualify, and react effectively

Full coverage_

- > Handles over 3000+ applications
- > Compatible with TCP, UDP, IPv4 and IPv6, and more - instantly
- > Supports VLAN and all variety of network configurations

About us_

- > Leader in advanced threat detection
- > Innovative NDR technology with cutting-edge AI
- > 360° detection enhanced by our CTI
- > A large network of international partners, CISOs and analysts who place their trust in us - MEA, APAC, Europe
- > Recognised for our expertise
